

Drufi+ max FR 2315

Semi-automatic backwash filter DN 32 - DN 50

2

Field of application

SYR Drufi+ max FR is a compact semi-automatic backwash filter specially designed for installation at the domestic point of entry. The construction form results in a compact unit, so that installation is possible even in confined spaces. Use the Drufi+ max univer-

sal flange (order separately) for installation in the pipe. This flange can be mounted in vertical and horizontal pipework. The ball valve is supplied with a tundish for the connection of a synthetic pipe of DN 50.

Design

The Drufi+ max FR is composed of a mechanical semi-automatic backwash filter made of stainless steel. It also includes a flange

seal, hexagon socket screws for the flange assembly and an assembly key for the hexagon socket screws.

Drufi+ max FR 2315

Materials

The filter cap is made of high-quality synthetic material. The body and the internal synthetic parts are made of shock-resistant thermoplast, the rubber parts of ageing-resistant elastomer. All remaining functional parts are made of a low-lead dezincification resistant gunmetal alloy or stainless steel.

The ring seals are made of asbestos-free fibre. All materials are tested and certified by an internationally recognised test institute in Germany (DVGW). All synthetic components getting in contact with water designed for human consumption are approved by the German Public Health Office (KTW).

Installation

It is recommended to install a filter in a drinking water system for the protection against corrosion. System components and appliances located downstream should also

be protected by a filter. Install the Drufi+ max FR directly behind the water metering system and ensure that it is easily accessible.

Thoroughly flush the pipework prior to installation. Use filtered water from the first onset of the drinking water installation. Always use a universal flange to mount the Drufi+ max FR, which allows installation in vertical and horizontal pipes. The main axis

of the filter has to be vertical. Install the suitable flange in the pipework without applying stresses. Attach it to the filter body with 4 stainless steel screws; pull them pressure-tight crosswise with the key included in the delivery.

Technical data

Operating pressure:	min. 2 bar, max. 16 bar
Operating temperature:	max. 30°C
Mounting position:	main axis vertical
Fluid:	potable water
Mesh width:	90 µm (lower); 125 µm (upper)
Flow rate:	DN 32: 8.4 m ³ /h at 0.2 bar Δp
	DN 40: 9.0 m ³ /h at 0.2 bar Δp
	DN 50: 9.2 m ³ /h at 0.2 bar Δp
	DN 32: 13.0 m ³ /h at 0.5 bar Δp
	DN 40: 14.5 m ³ /h at 0.5 bar Δp
	DN 50: 15.0 m ³ /h at 0.5 bar Δp

Maintenance

When the flow rate is reduced due to increased pressure loss, but every 6 months at the latest, the filter needs to be serviced by backwashing. The backwash system of the Drufi+ max FR is semi-automatic. Open and close the ball valve to trigger the automatic back-

wash operation of the complete filter. Even during backwashing, the device continues to supply filtered water into the potable water system. The Drufi+ max FR can be retrofitted with the automatic backwash system RSA (2316.00.081) to become a fully automatic backwash filter.
